Career 360 Consult

Career & Education Consultancy

PROJECT PROPOSAL: CUSTOM WEB APPLICATION

Design & Development of a Custom Consultancy Web Application

A digital operating system for Career 360 Consult.

01

Executive Summary

OVERVIEW

This project involves the design and development of a custom-built web application to power your career and education consultancy at Career 360 Consult.

Unlike traditional websites that simply display information, your platform will function as a digital operating system for the consultancy, combining four capabilities under one roof:

Public Presence

A polished professional face for your brand.

Application System

Structured intake for consultation requests.

Client Workflow

Internal management of every enquiry.

Publishing Platform

Educational content and authority building.

The objective is to create a highly controlled, scalable, and data-owned platform that lets you manage consultation requests, schedule advisory sessions, publish your expertise, and build long-term authority in the career and education consulting space.

Your platform will be fully custom engineered, avoiding heavy reliance on third-party systems, ensuring you retain full control over your data, operations, and future expansion.

02

Platform Architecture

SYSTEM DESIGN

Your platform is built in clear, separate parts that fit together, structured into two major layers that work seamlessly.

LAYER 01

Public Experience

The public interface where visitors discover your services, consume your content, and apply for consultations.

LAYER 02

Internal Operations

A secure administrative environment where you manage consultation requests, publish content, and schedule advisory sessions.

PUBLIC STACK

Service Pages

Visitors explore offers

Content Hub

Guides, articles, resources

Application Forms

Structured consultation intake

INFO FLOW

Requests

Owned Data

Requests,
content,
schedules

Updates

Admin Dashboard

Review incoming requests

Workflow Control

Approve, decline, assign next steps

Scheduling Tools

Calendar, Meet, client updates

APPLY

Client submits a structured request

REVIEW

Team qualifies and manages the case

RESPOND

Content, decisions, and sessions return to the client

03

Core Platform Modules

WHAT YOU GET

MODULE 4.1

Consultation Application Engine

Instead of allowing instant booking, your platform introduces an application-based consultation model. This ensures your advisory time is allocated only to relevant and qualified clients.

WORKFLOW

Application to confirmed session

01	Apply CLIENT	A consultation request is submitted through the public form.
02	Capture PLATFORM	The application is stored and the applicant receives confirmation.
03	Review ADMIN	The request is reviewed and qualified inside the dashboard.
04	Schedule ADMIN	If approved, an available advisory slot is selected.
05	Invite PLATFORM	Calendar event, Meet link, and client invitation are sent.

DECISION

DECLINED

Applicant receives a clear status update.

APPROVED

Meeting slot, calendar event, and invitation are prepared.

Workflow

1. Prospective client submits a consultation application.
2. The application is securely stored in your platform database.
3. The applicant receives a confirmation notification.
4. You review the application inside your administrative dashboard.
5. The application is approved or declined.
6. If approved, you select an available meeting slot.
7. The system automatically creates a Google Calendar event.
8. A Google Meet session link is generated.
9. The applicant receives the meeting invitation.

This workflow transforms consultation management from manual coordination into a structured digital process.

MODULE 4.2

Consultation Management Dashboard

A dedicated administrative interface giving you central control over incoming requests and platform content. Through this dashboard, you will be able to:

- review consultation applications
- approve or reject applicants
- schedule advisory sessions
- generate Google Meet consultation sessions

- track scheduled consultations
- manage blog content
- publish educational resources
- showcase client success stories

MODULE 4.3

Educational Content Publishing System

A built-in content management system that lets you publish:

- educational blog articles
- career guidance content
- scholarship preparation insights
- study abroad preparation resources

This component positions you as a knowledge authority within your domain.

MODULE 4.4

Resource Library

A structured repository for your educational materials. Supported formats may include:

Downloadable guides

Reference documents

Video content

Curated external resources

Audio explanations

MODULE 4.5

Success Story Showcase

A dedicated module to display your client outcomes and advisory impact. Examples include:

- successful university admissions
- scholarship awards
- career transitions
- job placements
- academic achievements

This component strengthens credibility and demonstrates measurable value.

04

Data Ownership Philosophy

INDEPENDENCE

Your platform is designed to maintain maximum data ownership and operational independence.

Key operational data, including consultation requests, scheduling records, blog content, and resources, will be stored within your own platform infrastructure rather than locked inside third-party systems.

Long-term Flexibility

Adapt the platform as your consultancy evolves.

System Extensibility

Build on top of what you own, without limits.

Full Control

Your data lives where you decide it lives.

05

Deliverables

WHAT'S INCLUDED

The following deliverables are included in your project scope:

✓ Custom web application design

✓ Responsive mobile and desktop interface

✓ Consultation application engine

✓ Consultation management dashboard

✓ Google Calendar scheduling integration

✓ Google Meet session generation

✓ Blog publishing module

✓ Resource management module

✓ Success story showcase

✓ Contact enquiry system

✓ Basic search engine optimization setup

✓ Application deployment and configuration

Project Guardrails

WORKING TERMS

These working terms keep the project clear, practical, and protected on both sides.

PROJECT ASSUMPTIONS

- Client provides final logo, brand assets, service details, and page content required for launch.
 - Client provides or authorizes access to domain, email sender, Google Calendar / Meet, and required third-party accounts.
 - Delivery timing depends on timely feedback, content availability, and approval of key screens.
-

SCOPE BOUNDARIES

- Future expansion items listed in this brief are roadmap options and are not included in the current build unless separately approved.
 - Paid ads, long-term content creation, payment gateway setup, advanced CRM features, and data migration are outside this scope.
 - Major feature changes after approval may affect timeline and cost.
-

LAUNCH SUPPORT

- Includes deployment, production configuration, SSL setup, and a final walkthrough of the admin workflow.
 - Includes basic handover guidance for managing requests, content, resources, and success stories.
 - Includes a short post-launch correction window for defects related to the agreed build scope.
-

Package Comparison

SUPPORT OPTIONS

All packages include the full agreed platform build. The difference is the level of post-launch support, content assistance, refinements, and long-term platform care included after launch.

PACKAGE AREA	CORE LAUNCH	FULL PLATFORM SUPPORT	GROWTH & OPTIMIZATION
Full agreed platform build	Included	Included	Included
Admin handover	Basic guidance	Guided walkthrough	Guided walkthrough
Support duration	Short stabilization window	First full year	Expanded support period
Post-launch corrections	Clearly defined correction requests	Reasonable within-scope updates	Reasonable updates plus growth support
Content upload assistance	Client-managed	Included for ready content	Expanded assistance
Platform checks	Launch check only	Periodic checks	Optimization reviews
Advanced growth features	Discuss separately	Discuss separately	Selected features can be included

The Full Platform Support Package is recommended because it covers the first full year of real platform use, while keeping support limited to valid within-scope updates, corrections, content uploads, and platform guidance.

08 Future Expansion Opportunities

ROADMAP

Your platform architecture will support future upgrades that can be implemented as your consultancy grows:

- paid consultation scheduling
- payment gateway integration
- digital course distribution
- client portal access
- automated appointment scheduling
- analytics dashboards
- marketing automation tools

09

Estimated Development Timeline

SCHEDULE

ESTIMATED WINDOW

3 to 4
WEEKS

A single delivery window for the full build

This estimate covers planning, interface design, application development, testing, deployment, and handover as one coordinated implementation cycle.

PLANNING

DESIGNAPPLICATION
BUILD

TESTING

DEPLOYMENT

HANDOVER

Final timing may vary depending on content availability, approvals, and feedback cycles.

10

Engineering & Running Costs

INVESTMENT

Beyond the one-time build, your platform has an intentionally lean ongoing cost structure. We engineer the system to operate within the free tiers of trusted third-party services so you don't carry recurring infrastructure bills as you grow.

ANNUAL RECURRING COSTS

Domain Name

career360consult.com, yearly registration

\$15 / year**Application Hosting**

Production server, deployment, and SSL

\$50 / year**Total Annual Running Cost****\$65 / year**

ENGINEERED FOR ZERO HIDDEN COSTS

Your platform integrates several professional third-party services. Rather than putting you on paid plans by default, we architect the system to stay within the free usage limits of each one, so you get enterprise-grade capability without enterprise-grade bills.

Cloudinary

Image & media storage / delivery

FREE TIER OPTIMIZED

Google Calendar API

Consultation scheduling

FREE

Google Meet

Video consultation sessions

FREE

Gmail SMTP / Resend

Transactional email delivery

FREE TIER OPTIMIZED

Should your usage one day exceed any free tier (a sign of strong growth), each service offers transparent paid plans you can opt into individually. You stay in control, and you only pay for what you actually need.

PROJECT BILLING

The full development investment for this project is quoted in a separate billing document, referenced as **SAH-BD-20260428-BIL-C360-51**, issued alongside this proposal.

11

Expected Outcome

THE RESULT

On completion, you will have a custom-built web application that digitizes your consulting workflow end-to-end.

Your platform will enable you to:

- attract and qualify potential clients
- manage consultation requests efficiently
- publish authoritative content
- demonstrate measurable advisory impact
- scale your digital presence over time

More than a website. A platform built around how you actually work, ready to grow with you for years to come.
